

Compare Microsoft Teams to Zoom

Microsoft Teams is the hub for teamwork in Microsoft 365 that integrates the people, content, and tools your teams need, including meetings. Microsoft Teams meetings enable you to meet anywhere, meet with intelligence and meet with confidence. If your company is looking for an online meetings solution, then look no further than Microsoft Teams.

Considering Zoom? Here are a few reasons why Microsoft Teams is a better choice for your business.

Bring together everything your teams need

Microsoft Teams delivers a digital workspace that brings together chat, video meetings, calling, and files into a single, integrated app to empower teams across your organization.

vs.

Zoom supports meetings, but you will need to purchase and integrate other 3rd party tools to even partially emulate the Microsoft Teams experience.

Intelligently support the entire meeting lifecycle

Microsoft Teams meetings support more productive collaboration and intelligent communications across the connected lifecycle of a meeting

vs.

Zoom lacks many of the intelligent features that come built-in with Microsoft Teams, like availability recommendations, live captions, searchable recordings, and more.

Meet with confidence, anywhere

Microsoft has been a meetings leader for years. Microsoft Teams has a range of certified devices for every size, space and working style. We also offer a reliable, cloud-based telephony solution and a 99.9% financially-backed uptime guarantee¹.

vs.

Zoom is building their meeting room device portfolio and is a newcomer in the voice market. Zoom also does not have financially-backed SLA for any service.

Safeguard company data with intelligent security & compliance solutions

When you place your trust in a cloud service provider, security, compliance, privacy and data protection are top of mind. Microsoft is backed up by strong contractual commitments, and we understand what it takes to earn and continue to maintain your trust and confidence in our cloud.

vs.

Zoom requires additional 3rd party security tools such as multi-factor authentication and RMS and meets fewer compliance standards than Microsoft.
